

FLEXIBLE BASKETBALL RING

■ Product description

The flexible basketball ring with springs has a non-hook system for fixing the net. The tilting mechanism is based on the springs what provides complete safety. The non-hook system is based on special plate with thickness of 3 mm, laser cut and cold-formed. The ring is equipped with a security cover that protects the hand against the trapping while going back from the tilted position and with additional reinforcing plates with thickness of 5 mm.

■ Additional information

The ring is powder painted, accordingly to the regulations.
