

TELESCOPIC FOLDING TRIBUNE WITH FOLDING BACKREST

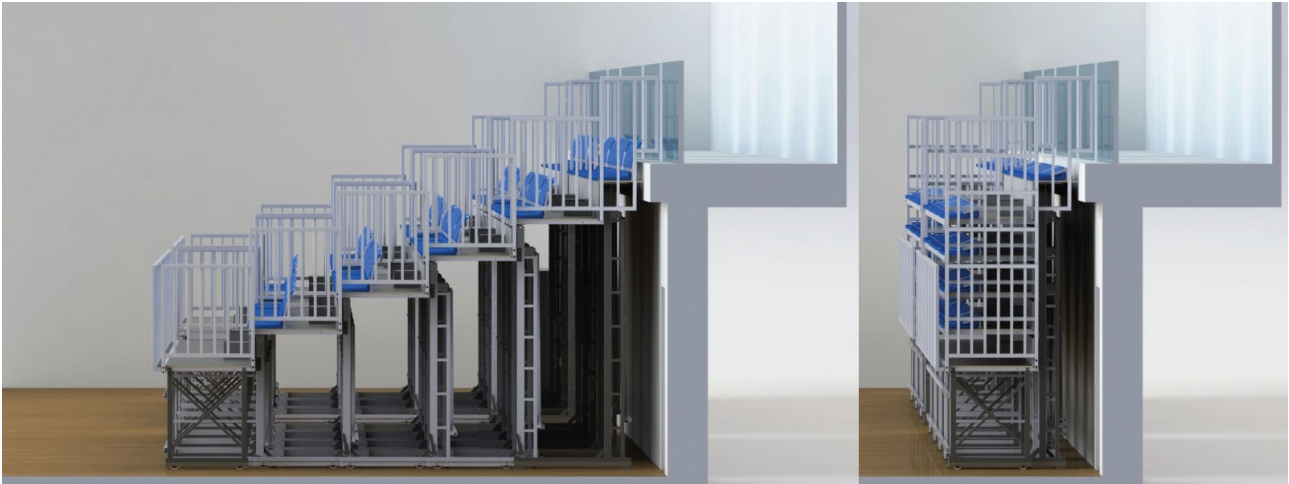

■ Product description

Telescopic folding tribune with plastic seats and folding backrest. Quantity of rows from 3 to 16.

■ Additional information

The construction of the tribune is made of sealed steel profiles 100x60, 50x40, and the channel sections 40x20. The stem of the tribune is provided by platforms which consist of legs equipped in polyamid wheels (min. of 3) with a polyurethane treadmill and horizontal landings welded in whole, finished with an anti-slippery plywood. The tribune has a system of guideways and rolls that enable smooth moving of each next platform.

In the first row, there is placed a blockade which blocks the platforms against self-folding. Vertical part is completed with furniture board. Sides of the tribune have a security barrier which is made of sealed profiles 40x40 and completed with 25x25 bevels. The steps are made of anti-slippery plywood. Construction is powder painted in colours from RAL palette.
