

## TEAM SHELTER FOR PLAYERS ALFA (SOLID POLYCARBONATE)

### ■ Product description

Team shelter for players Alfa, for 2-14 players, plastic polypropylene seats with a backrest height of 32 cm and a double backrest wall or wood bench, installed to the steel beam from the profile 60x40 mm. The seat bar is attached directly to the shelter carrying frame, which enables the load to be transferred evenly during use, to the ground - it reduces the tensions of the arches and polycarbonate, so that the fastenings of the cover are not damaged.

### ■ Additional information

Team shelter cover made of solid polycarbonate with a thickness of 3 mm. Solid polycarbonate is attached to the steel structure using special aluminum profiles with a gasket (preventing polycarbonate cracking and sealing function) and angles. The structure of the support frame is made of steel profiles, closed 80x40 mm, 60x40 and 40x40 mm. Cabin bows (cold bent) and upper crossbar made of 60x30 mm profiles. The whole steel structure is powder painted or hot-dip galvanized. The cabin frame has

plates that enable fixing to the ground. Team shelter version without a platform.
